

JUNG

LS1912<sup>®</sup>

19

MADE IN GERMANY SINCE 1912

## Pioneering spirit

As a pioneer of his time, Albrecht Jung laid the foundation for the JUNG success story with the founding of the company in 1912. Inventiveness and entrepreneurial courage characterise his personality. He is driven by the pursuit of progress, quality and design. Fundamentals that still define the company.

MADE IN GERMANY SINCE 1912

Albrecht JUNG  
Inventiveness has a future.

With this motivation, Albrecht Jung leads the company to economic success and secures its survival even in difficult times. The focus is on his patented invention, the pull switch with 1/8 rotation. Its principle of short actuation travel still applies today for all switch designs of the company.

## Craftsmanship

For over 100 years, the name of JUNG has stood for the highest quality in technology and design – “Made in Germany”.

Rocker switch, 1952

Porcelain rocker switch, 1960

## Durability

Innovation, passion and precision define the developments from JUNG. Then, now and in the future. The products are characterised by a well-thought-out operating philosophy and clear, functional design.

## Products “Made in Germany” – manufactured with precision

JUNG products are manufactured at the two company sites in Schalksmühle and Lünen. JUNG received the certificate “Made in Germany” from TÜV Nord in 2011 for this. With deep roots in the region and a constant employer for many decades, today customers throughout the world rely on the continuing high quality. At the same time, JUNG is aware of its high responsibility for sustainable and energy-efficient production.

JUNG has proven its specialist know-how in metalworking for decades. The company provides its switch designs in genuine metal. Matt finished or lacquered aluminium, stainless steel blasted with glass beads, brushed brass, chrome-plated metal or with almost 24 carat gold plating – JUNG produces precision switches down to the last detail every day.

## New interpretation

The future must have a past in order to transfer tradition into a contemporary form that can be experienced. In the style of the JUNG switches of the early years, the LS 1912 rocker switch brings a new experience to the mechanics of switching.

## Classic design with new interpretation

The rocker switch replaced the rotary switch around the beginning of the 1920s. The idea for the LS 1912 was born as a tribute to JUNG's history: A rocker switch that is a visual and haptic experience and bears the JUNG founding year in its name. Purist design and innovative strength have been combined at JUNG since 1912. With LS 1912, the traditional family business picks up on the historical shifting feeling, translates it into a new form and again proves its specialist know-how in metalworking.

Rocker switch, cover and switch mechanism have been modularly developed for LS 1912 so that no screws for the fixing are visible. Only the rocker lever stands out from the unit as a particular style element. LS 1912 with cylindrical rocker switch is available in classic brass, stainless steel, aluminium and Dark.

LS 1912 in aluminium with cylindrical rocker switch

LS 1912 in stainless steel with cylindrical rocker switch

LS 1912 in Dark with cylindrical rocker switch

LS 1912 in classic brass with cylindrical rocker switch

LS 1912 with conical rocker switch is also available in classic brass, stainless steel, aluminium and Dark. The stainless steel switches are blasted with glass beads, and the aluminium versions are pickled matt. LS 1912 in Dark is also based on aluminium and is lacquered in an elegant, dark brown colour.

## Cube

JUNG has specifically matched the cube variant to the material: the base material of the LS 1912 switches in chrome is brass. JUNG is setting standards for the manufacture of these high-quality switch versions with the perfect machining. The rocker switch for the LS 1912 in chrome is cubic.

LS 1912 in chrome with cubic rocker switch

Further details about the product can be found in the catalogue section starting on page 42.

## INTERNATIONAL

Over 200 inserts such as sockets, multi-functional connections and international systems can be modularly connected with LS 1912 to create contemporary residential and commercial solutions.

## Variety

JUNG enables greatest convenience in a timeless design. LS 1912 can be used in all 1-gang to 5-gang frames in the LS range (LS 990, LS Design, LS plus and LS ZERO) and fits in every commercially available deep flush-mounting box.
